GEN AI CONSUMPTION AND SAVE [Overall Save ~ X days/hours]

Phase	Usage	Impact [Save in Days]	Tool Used
Requirement Analysis Phase			N/A
Test Planning Phase	Test plan structure, scenario identification	1 day	ChatGPT
Test Execution Phase	Test case generation, edge case identification	0.5 day	ChatGPT
Automation			N/A
Report Generation			N/A

1. Introduction

The Search Bar allows users to search for products on the Amazon e-commerce website. When a user enters the first 2 or 3 characters in the search bar, relevant product suggestions with full product names should be displayed. Users can also refine their search by selecting a category from the category dropdown on the left side of the search bar. Based on the selected category and search input, the system should display relevant products accordingly.

1.1 Acceptance Criteria

- User should see the relevant product when they search for a valid product or brand.
- User should see an error “Not results found” when they don’t find the valid product or brand.
- Search bar should be highlighted by yellow border when clicked.
- Placeholder of the search bar should be “Search Amazon.in” when it is empty.
- Placeholder text “Search Amazon.in” should disappear when user types any character in the search bar.

2. Scope

2.1 In Scope -

Form Factor Coverage -

Form Factor	Applicable?
Android	☐
iOS	☐
mWeb	☐
Desktop	☑

Flavour’s Coverage-

Form Factor	Applicable?
Blender's Pride - Debug variant	N/A
Blender's Pride - Prod variant	N/A
AMRUT - Debug variant	N/A
AMRUT - Prod variant	N/A

2.2 Out of Scope

N/A

3. Test Strategy

3.1 TEST TYPE CHECKLIST

Test Type	Applicable ?
Functional Testing	☑
Compatibility Testing	☑
Performance Test	☑

3.1.1 TEST STRATEGY DETAIL

Functional Testing: Functional testing includes not only positive and negative test scenarios, but also boundary and edge case validations, along with basic UI-related functional checks to ensure the feature behaves as expected.

Compatibility Testing: Compatibility testing involves validating the Search Bar functionality across different web browsers such as Chrome, and Microsoft Edge to ensure consistent behavior and user experience.

Performance Testing: UI-level performance testing will be conducted by performing multiple sequential searches in the search bar to validate response time, stability, and smoothness of the application during repetitive user actions.

3.1.2 TEST COVERAGE-

OS Coverage -

	A	B
1	**Priority**	**Operating System**
2	**P0**	Windows Desktop
3	**P1**	N/A
4	**P2**	N/A

Screen Size Coverage -

	A	B
1	**Screen Size**	**Model**
2	433.198*40	Search Bar (Chrome)
3	499.32*40	Search Bar (Microsoft Edge)

3.2 Automation Plan : N/A

API Automation

Clearly mention the Automation strategy /approach that will be followed.

Call Outs if any

Details of the Framework used

Details of Package used

List out the API details that would get automated.

TC eligible for Automation

	A
1	**Test Cases Planned for Automation**
2	
3	

UI Automation

Clearly mention the Automation strategy /approach that will be followed.

Call Outs if any

Details of the Framework used

Details of Package used

List out the functionalities that would be covered and also whether E2E testing can be covered.

TC eligible for Automation

	A
1	**Test Cases Planned for Automation**
2	
3	

Latency Automation [If applicable, check BRD if page load time is less than X second, during such requirement we have to consider this automation]

3.3 Test Environments

Describe the requirements for the test environment.

- Operating System: Windows 11 Desktop.
- Browsers: Chrome, Microsoft Edge
- Application Stage: Production (amazon.in website)
- Dependent Services: Search API is available in production stage
- Notes: No beta/gamma environment available for amazon.in search bar testing

3.4 Test Data

Search Bar – Test Data
Valid Search Data

- Keyword: men running shoes
- Keyword: running shoes
- Keyword: shoes
- Keyword: nike shoes

Partial Search Data

- Keyword: run
- Keyword: sho
- Keyword: nik

Case Variation Data

- Keyword: Shoes
- Keyword: SHOES
- Keyword: sHoEs

Negative / Invalid Search Data

- Keyword: @@@@
- Keyword: ###$$
- Keyword: xyzqwert

Boundary Search Data

- Keyword: a (minimum characters)
- Keyword: shoeshoeshoeshoeshoeshoes (very long string)

Numeric / Alphanumeric Search Data

- Keyword: 123
- Keyword: shoes123

Special Character Search Data

- Keyword: shoes@
- Keyword: men&shoes

Account Type	Username	Purpose
Regular User	testuser1@example.com	Basic search & result validation
Prime User	primeuser@example.com	Verify premium-only products or recommendations
Guest User	–	Verify search without login

3.5 Test scenarios

High-Level Scenarios for testing the Project, based on which the cases will be derived and modified accordingly.

UI

	A	B	C
1	Module	Use Cases	Remarks
2	Search bar	Validate Search for a specific brand	Functional, Positive Test
3	Search bar	Validate Search for an empty space	Functional, Negative Test
4	Search bar	Validate Search with single character	Functional, Positive Test
5	Search bar	Validate Search with special characters	Functional, Negative Test
6	Search bar	Validate Search with invalid data	Functional, Negative Test
7	Search bar	Validate Search for multiple products sequentially	Non-Functional, UI-level Performance Test
8	Search bar	Validate Search in different browsers	Non-Functional, Compatibility Test
9	Search bar	Validate the left dropdown selections (e.g., Amazon Fresh, Amazon Devices)	Functional, Positive Test

Backend/API

	A	B	C
1	Service/API	Use Cases	Remarks
2			

3.6 Test Cases (test cases can be a follow up)

1. Verify that searching for a specific brand (e.g., RENEE) displays only RENEE products.
2. Verify that searching with an empty space refreshes the home page or displays default results.
3. Verify that searching with a single character (e.g., E) displays related products containing that character.
4. Verify that searching with invalid data (e.g., dshdefewifwfiw) displays a “No results found” message.
5. Verify that searching multiple products sequentially (e.g., Pen → Notebook → Lipstick → Atta → Ghee) displays correct results and response time is acceptable.
6. Verify that selecting “Amazon Fresh” from the left dropdown and pressing Enter navigates to the Amazon Fresh page.

3.7 Defects

Defect ID:
Module
Test Case ID:
Title / Summary
Description:
Steps to Reproduce:
Test Data:
Expected Result:
Actual Result:
Severity:
Priority:
Environment:
Status:
Assigned To:
Attachments:

4 Assumptions and Dependencies

5 Risks and Contingencies

Describe any risk factors that may impede the success of this project and how to mitigate them.

Risk	Impact	Mitigation Plan

6 Test Deliverables

	A	B	C	D
1	**S.No.**	**Deliverable Name**	**Author**	**Reviewer**
2	1	Test Strategy and Test Plan	QAE@	QA Team, QAM,Dev Team/SDM
3	2	Test Cases	QAE@	QA Team/Dev Team/PM
4	3	Test Data	QAE@/PM@	QAM/SDE/SDM/PM/TPM
5	4	API Testing & IN-Sprint planned automation	QAE@	
6	5	First Test pass	QAE@	

7	6	Daily status report(including bug reports)	QAE@	QAM/SDM/TPM/PM/SDE/Clients QA if any
8	7	Defect Fix by Dev	SDE@	
9	8	Production Sanity	QAE@	
10	9	Defect Validation	QAE@	
11	10	Sanity & Sign-Off	QAE@	QAM/SDM/TPM/PM/SDE
12	11	Create sanity cases if required and update on the Intake	QAE@	
13	12	Share Quality metric	QAE@	QAM/SDM/TPM/PM/SDE
14	13	Client QA Sign Off		

7 Dev Build Plan

Add the tracker link if present for the project here. Generally, avoid attaching the entire tracker as table here, as it has overhead of maintenance.

	A	B	C
1	**Build Version**	**ETA**	**Notes**
2			
3			
4			

8 QA Acceptance/Entry Criteria

This section should be pasted in the Status Mail.

	A	B	C
1	**Criteria**	**Status**	**Comment and ETA**
2	Developer to Execute BVT Cases before build drop BVT List - here		
3	Developer to document and share all Code Review feedback in Quip, with descriptions of the associated functional changes and coverage		
4	All the Open Questions are addressed		
5	Weblab detail with access in place		

9 QA Exit Criteria

This section will add in Intake Template as a mandatory fields to be added before closing

	A	B	C
1	Task	**Status**	**Comment and ETA**
2	100 % Test cases Executed.		
3	100% Test Strategy is covered and completed		
4	All open issue are triaged and got alignment to differ.		
5	Planned Automation completed		
6	All the Open Bugs are triaged and have Product alignment		
7	Client Sign off are in place (If Applicable)		
8	Test Rail is updated		

10 Open Questions

Mention all the Open questions present during the design/development/review & execution phases.

- Parent sim containing all the issues
- Track any outstanding issues, owner for follow up and status. This list typically represents QA questions that are not answered yet.

11 Effort Estimation / person

Add table and provide effort estimations here itself for all the phases. If the Project is not coming in phases provide detailed estimation here after calculating.

Task Name	Ownership	Start Time	Finish Time	Status	Comments(If any)
Requirement Understanding					
Test Planning					
Test cases writing					
Test plan Review					
Test Data collection if required					
Planned buffer					
First Pass completion					
Bug creation, Retest the bug and Triage					
Retest the failed cases and Sanity					
Any test planned to test in prod
